

Bulletin Volume 95-103 (Paperback)

By United States Bureau of Entomology

Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1913 Excerpt: .as food changes. They first make their appearance in April and May on the new growth of the Navel orange, reaching the first maximum of abundance about the time four-fifths of the petals are off. When most of the petals have fallen a few thrips pass to the more advanced fruit and the number feeding on the latter rapidly increases as the first growth of foliage becomes hardened and distasteful. The thrips continue feeding on the fruit until the latter, in turn, becomes somewhat tough, and reach a second FIG. 1.--Diagram Illustrating the relative abundance of orange thrips on oranges, on orange foliage, and on other plants during the season. (Original.) and greater maximum in May. June, and July. They then pass once more to the succulent growth which has come on in the meantime, and reach the third and final maximum of concentration in August..

Reviews

It is one of my personal favorite books. It is written in easy terms and never hard to understand. It has been designed in an exceedingly easy way and it is only after I finished reading this publication by which in fact changed me, change the way I think.

-- **Lucinda Stiedemann**

This publication is amazing. This can be for all who state that there had not been a worth reading through. I realized this publication from my father and dad encouraged this ebook to find out.

-- **Desmond Schuster II**
