Anderson and Pelton (1976) reported that eastern cottontails that did shift their home ranges were not observed to return to their original home range. Temporary home range departures were recorded after the onset of the breeding season. Unless a sudden reduction of cover occurred, cottontail s remained within their home range. Local populations of eastern cottontails may reach a density of 20 (8 acre) rabbitslha although densities are normally lower (Chapman et al. 1982). The average winter home range size for male and female eastern cotton-tails in Tennessee was 2. 8 ha (6. 9 acres) and 2. 2 ha (5. 4 acres), respectively (Anderson and Pelton 1976).
